

RadPix

Radiological Teaching File System

RadPix is a radiological teaching file system which can be integrated into any PACS environment. It allows users to send selected images directly from the PACS to a stand-alone teaching file server. Images are anonymized by the system. Complete radiological teaching files can be created by adding text, annotations and images. Annotations are added using built-in drawing software, designed for radiologists. Images can be exported as JPGs, PowerPoint files, Image Stacks in PowerPoint files and videos. Publication quality TIFF images with annotations are easily created and downloaded.

Users can scroll through stacks of images, change window and level settings, and toggle annotations on and off the images.

RadPix extends your PACS functionality to a teaching file platform.

For more information, visit www.radpix.com for demo or email info@radpix.com.
